Customer Praise

“

I've been happy to give my endorsement.

We've been very pleased with our sign. Your product is a blessing to our church members and attracts much attention from passersby. Several other local churches have inquired about price and effectiveness of the sign.”

— Pastor Rammy Arnold

“

our advertising budget has decreased. On days we run advertised specials on the display, customers are lined up at our door waiting for us to open.

The increase in our store's overall daily sales are directly associated to the advertisements that are being displayed on the sign. The public has come to rely on our messages and specials due to the sign's visibility from both sides. We've had great feedback from our customers about Adaptive's Display.”

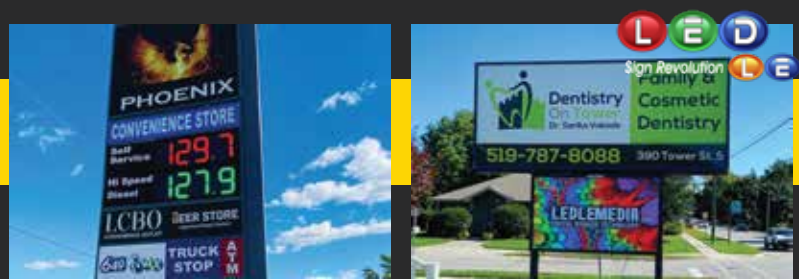

— Linda Whitby

“

Both my coffee and candy sales increased as a result of promoting the items with the sign.

Ledle Media Signs are very effective. The colors are very vivid and pop off the display from quite a distance. The sign has been more effective than some of the other media advertising outlets we have tried. I will definitely install these additional units in stores.”

— Mark Stueber, Kornell's Express

LED GAS SIGNS

DESCRIPTION:

Led Sign Toronto provide a range of 7-segment or full matrix LED petrol price displays to replace existing price signage.

The signs can be easily retrofitted into an existing pylon or we can assist you in replacing the whole pylon.

Ledle Media work with a number of service station systems and named /Brand such as Esso, Petroleum Plus, ECNO and many more famous brands that allow the signs to be automatically updated from the central system so when the browser updates the signs automatically update to the correct pricing, so there is no need for the attendant to do anything.

At Ledle Media (Led Sign Toronto) can also provide a standalone system so the prices can be changed by a simple touch of a button either at the pylon or via wireless communication.

Why Ledle Media?

CERTIFIED SUPERIORITY

Ledle Media full color A-Series displays are engineered for maximum reliability and perform well in the harshest environments. Every unit is burned-in and subjected to QC & QA tests.

TEMPERATURE TESTED

Signs handle torturous temps from -22°F to 122°F (-30°C to +50°C) at full solar load.

ROHS COMPLIANT

All designs meet stringent global hazardous material restrictions.

LIFE TESTED

Helps ensure maximum longevity of every Adaptive LED display.

UL LISTED

Signs meet or exceed rigorous safety standards for design and manufacturing.

ELECTRICAL TESTED

Products pass surge protection; electrical fast transient, ESD and radiated emissions tests.

UL ENERGY VERIFIED

UL-verified products consume less energy and decrease overall operating expenses.

CLIMATE TESTED

Signs perform reliably in extreme coastal, desert, southern and northern climates
